Safe Loading and Unloading Checklist

Is the load positioned to maintain vehicle stability, steering and braking? Unloading

- 1 Has any cargo moved in transit?
- 2 Are all items effectively secured?
- 3 Are top loaded items stable?
- 4 Could any cargo move or become unstable if the load restraint devices are removed?
- 5 Is there suitable equipment available to unload the vehicle/s?
- 6

Guideline 1 Transporting gas cylinders and other gas products

enough for each type of load carried, and must be in good working condition Providing adequate load restraint Every load must be restrained to prevent unacceptable movement during all expected conditions of operation For more information refer to Load Restraint Guide, published by the National Transport Commission

Safety in the road freight transport industry

Load area access Working at ground level Review all tasks that are performed at height and consider ways to perform it at ground level, or from a solid platform Where possible, configure loads so there is no need to access the tray or trailer Use a crane and slings, for example, to take the load from the trailer to the unloading site

The official New Zealand truck loading code

A load carried on a vehicle without restraining devices will not be secure because the frictional restraint between the load and the platform of the vehicle will be less than the dynamic forces that tend to move the load It follows, therefore, that it is necessary to provide additional restraint to prevent the load ...
